DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21 and 25, drawn to a climate conditioning animal house, classified in class 119, subclass 500.
- II. Claims 22-24, drawn to a hinged animal house, classified in class 119, subclass 436.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the hinged animal house of Invention II does not require the climate conditioning aperture of Invention I. The subcombination has separate utility such preserving animal food contained in the structure.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Upon election of Invention I, applicant is required to further elect a single species as defined below:

Art Unit: 3643

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I: Figs. 1, 2, 4, 5, and 6; climate conditioning aperture with gap

Species II: Figs. 7; heating unit adjacent to climate conditioning aperture

Species III: Figs. 8-10; interior mounted heating unit, separate but below the cover plate of the climate conditioning aperture

Species IV: Figs. 11-14; interior mounted heating unit as a single unit with the climate conditioning aperture

Species V: Figs. 15; exterior mounted heating unit

Species VI: Figs. 16 and 17; forced cooling assembly

Species VII: Figs. 18 and 19; igloo housing

Species VIII: Figs. 22 and 23; hinged pivotal movement

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

Art Unit: 3643

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
